

Amendments to the Specification

Please add the following new paragraph after the paragraph ending on page 13, line 18:

Figure 7 depicts, in perspective, a type of core that can be used in the injector of the syringe previously depicted.

Please add the following new paragraph after the paragraph ending on page 20, line 4, as follows:

Fig. 7 depicts a core 35 viewed in perspective. This core can be mounted on a support of the type depicted in Figs. 1 and 2. The core 35 is essentially circular and cylindrical, and on the upstream side has a frustoconical shoulder, the upstream face 351 of which is visible. The lateral surface 350 of the core 35 has helical grooves 55 (only one groove shown) of semicircular cross section, and the helical grooves 55 continue into the shoulder. When this core 35 is fitted into a housing of a support, these grooves 55 will produce nozzles.

Amendments to the Drawings:

The attached additional drawing sheet adds Fig. 7.
